- has European-wide operations headquartered in Germany

EXPERTISE

We only do what we can really excel at and

therefore tecmasters are focused on two particular fields in the area of Enterprise Content Management:

- Development and
- System Integration

DEVELOPMENT

We create and develop ECM solutions based on standard Microsoft technologies using the .NET Framework. The .NET framework is a flexible and platform-independent environment for programming, deploying, and running XML Web services and other applications achieving the optimal performance and security of the solutions at minimal cost. Our consultants are experienced system architects and developers in the .NET environment. You can be sure that your solution will be quickly, efficiently and economically developed, and will be fully integrated in your existing business processes.

SYSTEM INTEGRATION

We believe that system integration means optimal assembly of individual components into an overall solution. A solution in which the whole thing is far more than the sum of its parts. We determine - if necessary together with our partner BearingPoint - your requirements in order to develop a solution precisely tailored to your specific needs. In the interest of efficient implementation, we rely fundamentally on standard technologies from Microsoft and its partners.

Thus we can cover the entire life cycle of a project from the initial conceptual discussions right through to the implementation of the system. Our approach ensures a reduction of complexity, especially in comprehensive projects. Strategy, and process and technology consulting, including change management, are combined together to ensure a each a unified integrated solution, centered around your business goals.
